

**Boiling eggs the easy way.**

Always store BeepEgg together with the real eggs.

BeepEgg is based on a thermal model which will only

function EGGSactly, if BeepEgg and the real eggs start with the same temperature. BeepEgg measures water temperature and calculates the inner temperature of the real egg. Put BeepEgg and the real eggs together in a pan of either cold or boiling water.

**We recommend starting from cold as you do not need to pierce the eggs and it also saves a lot of energy.**

**To stop the tunes and turn BeepEgg off, place in cold water.**

**BeepEgg is optimized for medium to large eggs.**

If you choose XL-eggs, you will need to extend the cooking time by approx. 30 seconds.

BeepEgg also works at higher altitudes, where water boils before reaching 212°F (100°C ).

BeepEgg's chief advantage is that it uses a temperature-based model, this means it starts to monitor the cooking process even before the water starts to boil.

By the way, you can boil as many real eggs as you want at a time.

**Hard, soft - or ?**

BeepEgg is suitable for all cooking preferences and plays 3 different tunes, each indicating a different degree of hardness.

**1st tune for perfectly soft-boiled, dippy eggs.**

Egg white soft and the yolk runny.

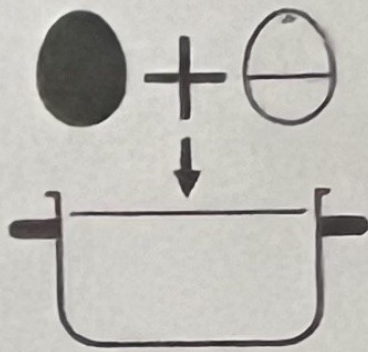

**2nd tune for perfect medium-boiled eggs.**

Egg white is hard and the yolk still slightly runny.

**3rd tune for perfect hard-boiled eggs.**

The yolk is hard but not discolored by over-cooking.

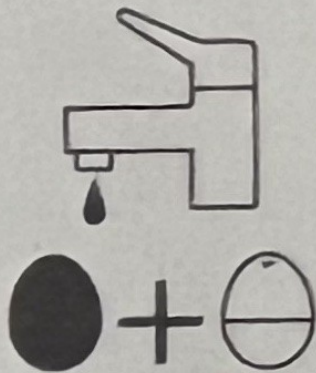

**Brainstream hopes you have lots of fun boiling your eggs.**

**1** Store together.

**2** Boil eggs together until tune plays.

**3** Quench eggs together.

**4** Only eat the real eggs!

**What do the "beeps" mean?**

**1st Beep:** The first beep is triggered when the water temperature reaches approx. 45°C and means BeepEgg is working

**2nd Beep:** When the water starts to boil, the second beep will occur. At this point the heat can be reduced

**The 3 tunes:** As the eggs cook the tunes will play to indicate different levels of hardness, each one plays several times to allow you to fine-tune your preference. As soon as "your" tune plays place both BeepEgg and the real eggs in cold water, remove the real eggs and enjoy! Leave BeepEgg in the cold water to cool off.

### **The right BeepEgg treatment.**

Never use BeepEgg in a microwave! Never use BeepEgg in a saucepan without water (BeepEgg has to swim in the water!).

Do not try to open BeepEgg! Do not use a damaged or deformed BeepEgg! Do not discard BeepEgg in an open fire! Do not swallow BeepEgg!

Only use BeepEgg to boil eggs.

The battery has a limited economic life-time. The warranty is two years. Life-time can be extended, by storing it together with the eggs in the fridge

Low temperatures extend lifetime. The expected life-time is printed on the bottom of the box. If the first beep doesn't sound anymore, please dispose of BeepEgg as you would any other battery.

BeepEgg has been tested and found safe according to food laws.
